# Dynamic Proxy pattern lab

Given is the following bank application:

Add the following **dynamic proxies**

a. Write a logging proxy that logs all method calls on the AccountDAO class.
b. Write a timing proxy that computes the time for every service level method we invoke
c. Apply the timing proxy also for DAO method calls.

Here you find examples of how to write dynamic proxies in Java:
http://www.javacodegeeks.com/2012/08/creating-java-dynamic-proxy.html
